COPILOT FOR MICROSOFT 365:

Copilot Readiness Assessment and Implementation

Preparing Your Organization for AI: Assessing Current Security, Ensuring Data Privacy, and Implementing Best Practices for Deployment and Adoption

Is your business ready for AI?

Just because AI tools are available, does not mean your business is ready to implement them. AI still requires oversight and a human touch. It's not a one-size-fits all solution. Integrating an AI tool like Microsoft 365 Copilot to your business can enhance productivity by automating routine tasks, giving you more time for what truly matters — creativity and innovation. We can help you at every step of the way; from getting AI-ready, implementing Copilot to your business, and working with you to identify specific business applications for seamless internal adoption.

KEY ACTIVITIES

✓ **Migrate Data to MS Cloud**

✓ **Investigate Current Data Security**

✓ **Apply AI to Core Business Functions:**

- **Running Effective Meetings**
- **Gain Key Insights from Data Analysis**
- **Creating Meaningful Content**
- **Email Processing**

DELIVERABLES

Copilot Readiness Project

A comprehensive plan to get your business AI-ready by investigating your current data security posture and working to ensure all data is in the right location to be successfully leveraged by AI while maintaining privacy.

Copilot Implementation

A project focused on successful internal adoption and deploying Microsoft 365 Copilot to core business functions such as running effective meetings, gaining key insights from data analysis, creating meaningful content, and email processing.
